

Family Relations and Applied Nutrition: MSc, PhD

Applied Human Nutrition

Applied Human Nutrition is a field of study offered by the Department of Family Relations and Applied Nutrition. We are a unique, interdisciplinary academic unit focused on integrating research and practice. Our faculty members conduct applied and inter-professional research that encompasses the continuum of the life cycle in diverse settings, including public health, the community, and clinical settings.

uoguelph.ph/ahn

The field of Applied Human Nutrition (AHN) offers a MSc and a PhD, which involve a combination of course work and a research thesis. In the case of a PhD, the completion of a qualifying exam is also required.

Research Expertise

Graduate students have opportunities to conduct independent research from inception to analysis in community, lab and clinical settings using nutrition, epidemiological and/or social science methodologies.

Admission Requirements

- An honours bachelor's degree, or equivalent
- A minimum 75% average in the last 2 years of study
- Grades of at least 75% in applied statistics and social science research methods courses
- For PhD, master's degree with a research-based thesis in human nutrition or a closely related field

Application Deadline:

January 6, 2020

Kira completed her MSc in FRAN in the field of Applied Human Nutrition. She is interested in better understanding how to help families with young children improve their diet quality and reduce their risk of chronic disease. Kira's research examines the impact of household chaos on child diet quality as part of the Guelph Family Health Study and Family Food Skills Study.

Eligibility

Individuals from an applied human nutrition discipline as those who have non-AHN backgrounds are encouraged to apply to the MSc and PhD options in the AHN field. We welcome students with diverse backgrounds such as applied human nutrition, nutritional sciences, food science, biomedical science, health promotion, psychology, and kinesiology.

Faculty

Dr. Andrea Buchholz
Dr. John Dwyer
Dr. Dalia El Khoury
Dr. Laura Forbes
Dr. Jess Haines

ARE YOU INTERESTED IN:

- Community nutrition
- Clinical nutrition
- Nutrition throughout the lifespan
- Physical activity and sports nutrition
- Chronic disease risk
- Indigenous health
- Food security
- International nutrition

CAREER OPPORTUNITIES:

- Public health nutrition
- Sports nutritionist
- Nutrition program manager
- Research coordinator
- NGOs
- Regional/Public/International health agencies
- Regulatory affairs
- UN agencies
- Academia

Applied Human Nutrition Faculty and Research Areas

Andrea Buchholz

I have three research streams: (1) Body composition and energy expenditure. I am the Director of the University of Guelph Body Composition Lab, and a co-investigator of the Guelph Family Health Study, with a research interest in children's and parents' body composition. (2) Dietary intakes of families, with a focus on calcium and dairy product intake. (3) The use of patient simulations in the education of undergraduate and graduate students in nutrition.

Research Interests: body composition (obesity), nutrition and dietary intakes of families, and the scholarship of teaching and learning.

John Dwyer

My overarching research interest is health promotion, particularly the promotion of healthy lifestyle behaviours such as physical activity, non-sedentariness (less sitting), and healthy eating among adults and adolescents. Several specific areas of research interest are (a) psychology of physical activity, sedentariness, and healthy eating, (b) promotion of dog walking, and (c) program evaluation related to physical activity, dog walking, sedentariness, and healthy eating.

Research Interests: psychology of physical activity, sedentariness, and healthy eating; dog walking; program evaluation.

Dalia El Khoury

My research interests lie in the areas of 1) exploring new biomarkers for the metabolic syndrome, and their modulation by functional foods and/or physical activity, both in pediatric and adult populations; and 2) investigating the prevalence and psychosocial determinants of dietary supplement use among university athlete and non-athlete students, gym exercisers and other populations at risk.

Research Interests: functional foods; the metabolic syndrome; biomarkers; children and adults; dietary supplements; athletes, non-athletes and exercisers.

Laura Forbes

My research focuses on dietary intake during key developmental periods (adolescence, pregnancy) with the goal of preventing chronic disease, specifically, diabetes and obesity. Current projects focus on women's experiences with nutrition and gestational weight gain during pregnancy and communication of nutrition information during pregnancy.

Research Interests: nutrition, pregnancy, adolescence, carbohydrates, sugar, diabetes, obesity.

Jess Haines

My research focuses on identifying modifiable family-level factors that influence children's health behaviours and translating that knowledge into effective behaviour change interventions. I am the Co-Director of the Guelph Family Health Study, a cohort study of families with preschool-age children, and the Director of the Parent-Child Feeding Laboratory where we aim to understand how parent-child feeding interactions influence children's dietary intake.

Research Interests: families, children, obesity prevention, behaviour change intervention, parent-child feeding interactions.
